Introduction to Time Series

A Story of decomposition function

$$Xt = Tt + St + Et$$

"People hear statistics,
but they feel stories

What is a Time series?

Notion of a real world
event as an abstraction of a sequence
of timely activities.

Teen's life saved by Fitbit after device detects potentially fatal heart condition

Sarah-Jayne McIntosh, 18, was revising for exams when she noticed her her heart rate had soared from to 210bpm on her new Fitbit Surge

TIME SERIES

**We can use time series analysis when:**

- We have full information regarding the changes in the data
- Pattern in our time series can be explained only using the data itself

Characteristics of Time Series:

- Time or period of time is matter
- Have a regularly ordered-time (not random order)

Time series components:

- Trend: changes in mean
- Seasonality: cycle in a natural period
- Random: remainder component not captured by trend and seasonality

Code Demo

R Packages

dplyr
tidyverse
magrittr
skimr
dygraphs
data.table
lubridate

anomalize
seasonal
